Upright Marker Safety

All upright makers to be erected within this Cemetery must be capable of withstanding a horizontal force of 100 pounds (applied 4 inches below the top of the monument, in any direction), when set in dry mode (without monument compound between the base and die-stone). An upright monument unable to withstand 100 pounds of horizontal force must be properly pinned (permitting possible dismantling and safety restoration) to achieve this requirement.

The legal signing agent for the monument supplier hereby guarantees that the specifications of the upright marker upon erection comply with the By-laws of the corresponding Cemetery and accepts full legal and financial responsibility if non-compliant.
